

Training is held in our **bespoke training room** at our Head Offices in **Rochdale**, the **one day course** itinerary is split into two modules, the morning is based around the **Ziton fire panel's hardware** and functions and the afternoon goes through the **planner software**.

9:00am to 12:30pm

- *Overview of Fire Panel's Hardware, including the panel's circuit boards*
- *User Functions & layout of the controls*
- *Enable/disable devices, zones and outputs*
- *Viewing and editing zoning*
- *Connecting your computer to the fire panel & equipment required*
- *Uploading and downloading the information from and to the fire panel*
- *Analogue values and readings*
- *Editing devices including adding and removing devices from the fire panel*
- *Viewing I/O Mapping*

1:30pm to 3:30pm

- *Overview of the Ziton Planner Software*
- *Connecting to the FAP to enable you to Upload/Download your configuration file*
- *Starting a new project in the planner software*
- *Zoning devices in the planner software*
- *Adding, editing and removing devices in the software*
- *Reports generated from the software*
- *Global Settings within the software*
- *I/O settings within the software*

Training will be followed by a
Question & Answer Session
