

REACH Wireless®

Heat Detector

Product overview	
Product	REACH Wireless Heat Detector
Part No.	RW1000-400AP0
Digital Communication	Apollo protocol compatibility is handled via the Loop-Interface device, RW1700-030APO. See product for more detail.

Approvals

Technical data

All data is supplied subject to change without notice. Specifications are typical at 24 V, 25°C and 50% RH unless otherwise stated.

Detection principle Single NTC thermistor Communication Range 100 m (in open space)

between Loop-Interface and

Field Device Radio Frequency Channel Pairs

Status LED Green and Red 14 dBm (25 mW) Radiated Power

2x VARTA CR123A Lithium 3 V, Battery Type

1250mAh typical

Battery Lifespan 10 years in normal operation with

22 pairs

good signal strength (no dropped

messages)

-10°C to +55°C Operating Temperature

Maximum Relative Humidity

(non-condensing)

95%

IP Rating 40

Standards and approvals EN54-5 Class P, EN54-25

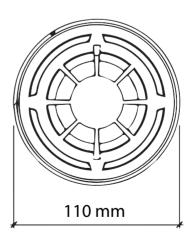

Dimensions 110 mm diameter x 70 mm height

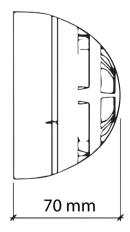

Weight (including base and 190 g

Product information

The RW1000-400APO is a wireless analogue addressable heat detector that can be configured as either rate-of-rise (A1R) or high temperature (BS) classification as specified in the EN 54-5. Multiple EN 54-5 classes (either A1R and BS) can be configured via the Loop-Interface during setup.

- Twin alarm, bi-colour LEDs for 360° visibility
- Programmable for rate-of-rise (A1R) or static temperature (BS)
- Bi-directional wireless communication
- · Dual channel redundancy
- · Ten year battery life
- · Five year product warranty

36 Brookside Road, Havant Hampshire, P09 1JR, UK.

Operating Principles

The REACH Wireless Heat Detector is flexible – offering either static (BS) or rate-of-rise (A1R) functionality.

Status LED

It also includes a 360° LED indicator which illuminates red or green to indicate status conditions.

Device Addressing

Device addressing is handled by the REACH Wireless Loop-Interface device (RW1700-030APO).

Devices are soft-addressed automatically when pairing with the Loop Interface and can be changed manually. Hardaddressing using Apollo XPERT cards are not supported.

Table 1: REACH Wireless Device Indication		
Device Status	LED Indication	
Power Up	Blinks green four times	
Power Up (dip-switch ON)	Blinks red four times	
Entering Wake-Up	Blinks alternatively green/red four times	
Link Success	Blinks green four times, then repeats	
Link Failure	Enters wake-up mode and signals 'Entering wake-up mode' following this failure	
Normal Condition	LED off	
Alarm	Red 1s, period 2s	
Battery Faults	LED off	
Tamper Fault	LED off	
Replaced	Blinks amber two times	

Communication

REACH Wireless Devices use 'radio-frequency' wireless communication to connect to the Loop-Interface.

The Loop-Interface (RW1700-030APO / RW1700-031APO) translates the wireless communication into wired Apollo protocol communication, with each device addressable individually by the fire panel. See datasheets for the Loop-Interface for more information.

Maintenance and Service

Maintenance must be performed in accordance with all applicable standards. Clean the detector externally using a soft damp cloth. For full cleaning and recalibration detectors should be returned to Apollo Fire Detectors.

Tamper detection

REACH Wireless devices contain an anti-tamper mechanism. In the event of removal from its base, it sends a tamper detection message to the Loop-Interface. Tampering detection is not signalled visually by the device

Base Compatibility

The device is supplied with a standard wireless base and is compatible with the following sounder bases:

Table 2: REACH Wireless Base Compatibility		
Part Number	Product Name	
RW1300-110AP0	REACH Wireless Sounder Base	
RW1300-210AP0	REACH Wireless Sounder VAD Base (White Flash) (C-3-15)	
RW1300-211AP0	REACH Wireless Sounder VAD Base (Red Flash) (C-3-10)	

Batteries

REACH Wireless devices are supplied with two CR123 batteries, battery A and B. The device switches periodically between the two batteries on a controlled sequence. For correct operation of the device, both batteries are required with adequate capacity reserves.

When battery A reaches a low power threshold, it will trigger a fault. This fault requires both batteries to be replaced in every instance as both batteries should be discharging equally.

When one (or both) batteries lack power, the Loop-Interface receives a low battery message and will signal this event on its in-built display, as well as relay the low battery message to the fire control panel. The battery fault will also be signalled by the device itself through its LED indicators if programmed (see table 1).

EMC Directive 2014/30/EU

REACH Wireless Heat Detector complies with the essential requirements of the EMC Directive 2014/30/EU, provided that it is used as described in this datasheet.

A copy of the Declaration of Conformity is available from Apollo on request.

Conformity of the REACH Wireless Heat Detector with the EMC Directive does not confer compliance with the directive on any apparatus or systems connected to it.

Construction Products Regulation (EU) 305/2011

The REACH Wireless Heat Detector complies with the essential requirements of the Construction Products Regulation (EU) 305/2011

A copy of the Declaration of Performance is available from Apollo on request.
