

C-TEC LAP2/CA Lockdown Alert Panel Functions

Please use this document alongside the ZFP Instal and Program Manual. Document Number: DFU5030000.

C-Tec ZFP Addressable Multi-Message Lockdown alert panel, LAP2/CA, is pre-programmed with 5 function key switches to activate 4 levels of Lockdown voice sounder messages & 1 Evacuation voice message.

This is controlled via a 5-way key switch module supplied with this panel as standard. See image below.

A Lockdown condition is created by activating a CA470B Lockdown Call point or by turning a function key switch to the correct Lockdown level at the panel.

If an MCP input is received, voice message 1, Full Lockdown, will be activated.

A Fire condition will be displayed on the touch screen display. We suggest using the Zone description as LOCKDOWN and an accurate location description for each device.

When any function key switch is turned, the programmed voice message will override any current spoken voice message that is being played.

Function Key switch 1.

This is a full lockdown alert. There is an immediate threat within the building. Please follow full lockdown procedure. Stay calm and stay alert for further instructions.
